

This license is for the same purpose as STA 1066-EX-ST-2020 but we are submitting form 442 because, of the need for a longer period of time. Due to many delays caused by COVID, which affected our employees travel and ability to work together as well as delays from our electronic equipment suppliers, it has not been possible to do the overall system debugging and final overall system over-the-air testing before the May 2nd, 2021 expiration of the above STA (License WR9XKO).

This system is to provide training to approximately 1500 British soldiers in Kenya and therefore the radios it uses are allocated 1360-1390 MHz in ITU Region 1. We obtained FAA coordination approval and NTIA coordination for the STA and only wish to be able to complete the final system testing which we are sure can be done by 10-31-2021.
