Message:

Mr John Kennedy,

As shown in detail in an attachment to our application on test sites, the closest anyone can get to the axis on the transmitting antenna is 10m in the case of test site B. This is under the scenario, that someone inadvertently walks in front of the antenna. However, we plan to cordon off the area and take every precaution to prevent a person coming into view of the transmitting antenna.

As can be seen from our choice of test sites that we have taken care in choosing our test sites so that topology of the area prevents anyone from getting very close to the transmitter.

Let me know if you need further clarification.

Thank you

Regards,
Bharath
