Bosch Pilot Product

1 General Description and Purpose

1.1 Overview:

For vehicle interior maintenance of the shared vehicle, Bosch is developing a trial product to sense vehicle interior and planning to conduct pilot test run in the field in major US cities.

1.2 Timeline:

Pilot phase and field trial run expected to run between 6 and 12 months before series production. The main purpose of the pilot phase is to

- Collect data for analytics
- Understand different use cases
- Improve product implementation

2 System

Bosch system is a set of sensors and processors, installed in a shared Vehicle, along with logic that can determine the **state** of the interior.

System does not, by itself, take any **action** as a result of the state detected, and instead passes along information to Bosch backend for data storage and analytics.

Please see the high level system context below,
