Subject: 1676-EX-ST-2020 pre-coordination data request

---

Message:

Respected Sir/Madam,

This response is regarding the email about "Prior coordination with the FAA is required for the frequencies 5180.00000000 MHz-5320.00000000 MHz".

We have added these frequencies initially since the Wifi chipset supports these in the U-NII-1 bands. However, wifi is not central to our testing. We can always use the other channels in the chip if required or even stick to the 2.4Ghz frequencies of the wifi chipset. Our testing in the next 6 months is focused on Cellular primarily. We have modified the application to remove these frequencies as we plan to disable them.

Since we are not going to operate in these frequencies by configuring the wifi chipset to avoid channel 34 to 64. We hope the STA can be granted without the "Prior Coordination letter".

Kindly let us know if any further details may be required.

Regards,  
Suman Yelati
