RE: File Number 0191-EX-PL-2006, FAA Coordination Number

Dear Mr. Kennedy:

Per our conversation, the application for the license has been updated to reflect the the specific frequencies that will be used for the experimental license. The frequencies are: 119.7 MHz, 121.6 MHz, 122.95 MHz, 124.15 MHz, and 125.45 MHz. In addition, I spoke with the Mike Jimenez (the point of contact at FAA headquarters) and he said that all of the frequencies will be listed under one coordination number (NGT 060404). If you have any further questions, please feel free to contact me.

Respectfully submitted,

John M. Giff
