

EXHIBIT 1 DESCRIPTION OF EXPERIMENT

Rockwell Collins, Inc., a Raytheon Technologies company, proposes to test its OneWeb communications system in support of independent research and development.

The tests will involve various fixed tripod-mounted antennas communicating with van-mounted antennas. The tripod-mounted antennas will generally operate from the Collins Aerospace campus in Cedar Rapids, IA, although other locations within the 80 km mobile radius may be utilized. All transmissions will be ground-to-ground, and there will be no communications with any satellites.

The stop buzzer point of contact is:
