Subject: FCC File No. 0348-EX-ST-2007

Message:

The code should be 388MF7E.

F=FM 7=two or more digitized channels E=Telephony(voice). Generally when people specify output power they use ERP. $ERP = (\text{Transmitter Power}) \times (\text{Antenna Gain})$. When a radio station says they have 100,000Watts of power they really might have Transmitter Power=20,000Watts with antenna gain=5.

Sincerely,
Larry DiNino
