Subject: Request for Info - File #0668-EX-PL-2015

---

Message:

The two locations with identical coordinates are for the two tower lift radars. The two lifts will always be within 100 m of each other as they are fed by a common clock. The experiment location has not been identified, but it will be within the 80 km radius of Ann Arbor, MI. Both lift systems will always be operated together in the same area. Only one experiment area will be used per collection day.
