## **Exhibit 3 – Modulating Signal Description**

The system will use simple CW pulses as short a 1  $\mu$ s along with linear frequency modulated (LFM) pulses with pulse widths from 4  $\mu$ s to 32  $\mu$ s. The rise and fall times of all of these pulses will be in the range of 10 ns to 25 ns and the LFM excursion rates are all in the 4.4 MHz to 5.0 MHz range.
