Representing the Interests of Two-Way Amateur Radio Communication

Lambdasat

Simon Kanis

24 March 2014

Dear Simon

Following your request for an uplink on 434 MHz, the best we can do is 435,220 MHz, the panel has agreed to coordinate the final frequencies as follows

Downlink 437,46225 MHz
Uplink 435,220 MHz

Uplink via Iridium (non- amateur licence not coordinated)

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

Please keep us informed once you have the final launch information as well as which other satellites operating on amateur frequency may be on the same launch

You are also referred to the ITU requirements for satellites. We have prepared an easy reference document which is available on www.iaru.org/satellite, it will assist you to comply with the ITU requirements for Amateur satellites.

While coordinating the frequencies noted above, we also note that use of frequencies as described in your request for frequency coordination appears inconsistent with numbers 1.56 and 1.57 of the ITU radio regulations.

RR 1.56 *amateur service*: A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorized [licensed] persons [individual natural people] interested in radio technique solely with a personal aim [for themselves] and without pecuniary interest [compensation].

(NOTE1: Explanatory terms in brackets are not part of the treaty text.),

(NOTE2: “ without pecuniary interest” means that you may accept free will donations of goods and services, that is, with nothing required in return. However, you may not accept money or other compensation for services or data provided to anyone for any reason.)

IARU Satellite Adviser: Hans van de Groenendaal ZS6AKV

Visit www.iaru.org/satellite for guidelines and important information

RR 1.57 amateur-satellite service: A radiocommunication *service* using *space stations* on earth *satellites* for the same purposes as those of the *amateur service*.

We strongly suggest consulting with your administration (telecommunication regulator) to determine if the amateur-satellite service or another radiocommunication service is appropriate for your operation. The decision of whether the proposed operation is appropriate for the amateur-satellite service rests entirely with your administration. We encourage you to share this letter with them.

Best wishes for a successful project. Please keep us informed of developments and progress.
