Subject: TES-3, 0493-EX-ST-2013 Deployed and Active

Doug, Joe:

Yesterday afternoon, TechEdSat 3 cubesat was deployed from the ISS, beginning what is expected to be a 10 day or so mission, before deorbiting.

The exo-brake appears to have deployed as planned, and beacon packets have been received. :)

As of late yesterday we had not yet received data packets from the Iridium Short Burst Data modem, but are continuing to monitor and attempt contact.

Thanks to both OET and International Bureau for your help with the licensing and filing activities for ths mission.

Best regards,

Mike Miller
