

Modification Request February 10, 2015.

This requests a modification to 0090-EX-ML-2013. The modification adds the following antenna at the same location:

POR 2.4M, a second antenna and transceiver identical to the one originally licensed, except the diameter is 2.4 meters rather than 3 meters. The EIRP for this antenna is 61 dBm (less than the existing 3M), all the other specifications are the same as for the 3 meter antenna already at this location.
