EDSN

Christopher Kitts

23 August 2013

Dear Christopher

Thank you for the coordination request as an experimental satellite. I have discussed your request with the advisory panel. The coordinated frequency is as requested

Downlink (8 satellites)	437,100 MHz
Uplink/Downlink	2.4012 – 2.4312 GHz (spread spectrum)

The above frequencies have been coordinated with the understanding that you have agreed to the IARU terms of reference for the use of amateur service spectrum for experimental purpose.

You have not indicated a final launch date. Please advise us the launch date once it is known. Although we have avoided coordinating frequencies which have already been coordinated for other known satellites on the same mission, it remains your responsibility to check for any possible conflict and advise us accordingly

Please also confirm the name and full contact details of the person who will control the operation of EDSN after launch.

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

We have noted the measures taken in controlling the satellite. We however draw your attention to the attached paper "controlling satellites" which sets out the requirements as per ITU regulations.

Best wishes for a successful project. Please keep us informed of progress
