Subject: Request for Info - File #0073-EX-CM-2016

---

Message:

As a matter of explanation for the changes associated with the amendment of Callsign WI2XOL, it has come to our attention that comprehensive testing of the subject equipment requires higher power than initially stated. The new maximum power we would like to use is 50 Watts, which will test the complete system at powers higher than typical operation in order to evaluate performance at these higher levels.. The vast majority of testing will be done at very low power as initially stated. However, we would prefer to occasionally perform testing at this higher power if possible.

We respectfully request this higher power amendment to our experimental license in order that we may continue development and testing of these units in our Morrisville, NC facility.

Please contact me if you have any questions regarding this matter.
