---

Message:

On March 21, 2008, the Federal Communications Commission requested that Sirius Satellite Radio Inc. (?Sirius?) coordinate its proposed experimental operations under File No. 0139-EX-PL-2008 with the Aerospace & Flight Test Radio Coordinating Council (?AFTRCC?). Sirius initially contacted AFTRCC with its coordination request on March 24, 2008. However, at this time, coordination has not yet been completed.

Based on statements from AFTRCC, Sirius anticipates that coordination will be completed in the very near term but probably not within the 30 day window provided by the FCC's request. Once coordination is completed, Sirius will provide a copy to the Commission by attaching it as correspondence to the existing application. Thus, Sirius requests that the Commission not dismiss Sirius? experimental application at this time.
