Subject: Geographical Coordinates

---

Message:

The actual location of Antenna #2 is located at 36 46'21.5"N 119 42'11.35"W. However, because the online application does not allow for decimals (it restricts each field to only two digits, thus the "11" for -SS). So the location listed on the application is the most accurate that your system will allow for.

Please inform me if there is something else I should do to make note of this on my application.
