Exhibit 2

Southern Company Service Territory

STI has listed one County from each of the States in which Southern operates. The Southern territory contains most of the States of Georgia and Alabama, the southern portion of Mississippi and the Florida panhandle. Georgia alone contains approximately 100 counties. However, in the event the Commission requires a list of all of the counties within the Southern service territory, this application can be further amended to supply that information. Initial testing of PLC by STI is planned to occur at the company lineman training facility located in Shelby County, Alabama.
