Subject: Request for Info - File # 0305-EX-CN-2017

---

Message:

The International Bureau has the following questions:

The applicant indicates the Swarm transmitter is positioned 3m above ground level and since the operation of their test will not occur within the Aeronautical Mobile, a 15 dB clutter and frequency offset filter discrimination has been included. How was this 15dB discrimination clutter/filter value derived? What ITU-R recommendation was used? Verify that both earth stations are fixed and will not be moved.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of October 30, 2017 may result in application dismissal pursuant to Section 5.67 and forfeiture of the filing fee pursuant to Section 1.1108.
