Subject: 0582-EX-CN-2020 pre-coordination data request

---

Message:

I submitted a radar geometry exhibit for the potential test coordination around the Huntsville section for the flight item (283000) is the 'locator' of the design and we have a base on the ground within that emitting region requested as the datalink (283150). Can you help clarify what form or file type, example is needed for the pre-coordination? Thank you!
