

EXHIBIT 2.
REQUEST FOR EXPEDITED PROCESSING.

TerreStar Networks Inc. (“TerreStar”) respectfully requests expedited processing for its STA request based on the intended uses of its network. The gateway earth station that is the subject of the STA request will be used to communicate with the TerreStar-1 satellite, and TerreStar plans to operate a resilient, interoperable two-way communications system that can be used to address homeland security, public safety, disaster preparedness, and rural and underserved community communications needs in North America.

To maximize the capability of its infrastructure, TerreStar is collaborating with the Defense Information Systems Agency of the Department of Defense (“DISA”). DISA and TerreStar have entered into a Cooperative Research and Development Agreement under which TerreStar is performing communications research and development aimed at interoperability of technology platforms, and improvement in interoperability disciplines including network, operations, applications, facilities and sustainment.
