RE: Request for Info - File # 0011-EX-ML-2006 [Reference Number: 4122]

The nature of our request is to allow us to test our products with the ETSI and Japanese frequency bands called out in the EPC mandate. We are designing passive UHF transponder antennas here at our facility to fulfill a coming worldwide demand. The reason we are requesting this modification change is to minimize our costs (development and finished goods cost), so our tag designer is making the tag antennas broadband and he is able to simulate the response, but we feel there is no substitute for real world testing and it will be much more efficient for the testing to take place here at our facility so he can make changes quickly as required.

I sincerely hope that this answers your questions.  
Please contact me if there are more.

Warm Regards,  
Josh Wyatt
