Subject: Request for Info - File # 0064-EX-CM-2019

---

Message:

Per the Commission's request dated March 22, 2019, Viziv provides the following response for application file number 0064-EX-CM-2019

1. The emission designator has been updated on the pending application to "NON";.
2. We have updated one of the two emission designators for the 100 kHz testing to 20K0M7D. This testing will be specific to eLoran and the modulation nature is assumed to be some form of BPSK which is not specifically called out on the character list. However, in general, the character could be "7"; which represents two or more channels containing quantized or digital information.
3. For the final emission designator, 20K0MXX, this eLORAN testing may encompass other modulation natures or types that are currently unknown at this time.
