Message:

Leann-

Yes, AMC-16 is at 85 deg W, the narrative was incorrect in stating 67 deg WL.

The EIRP SD patterns at 25 deg skew angle to AMC-16 that were provided in the narrative are also incorrect. I've already uploaded an updated narrative separately (dated 12 Oct) using "Add Attachments". This has corrections to all AMC-16 references, as well as new EIRP SD patterns (at correct 10 deg skew angle). All corrections and changes are shaded in green.

Sincerely,
David Katko
