Re: Transeastern Holding Corporate DBA Observant Network pending before the FCC for grant  
FCC FRN: 0025034620  
File No.: 0765-EX-PL-2015

To the Office of Engineering and Technology:

Observant has noted a delay in further processing our application for a grant of an Experimental Radios Station Construction Permit and License. It has come to our attention there might be certain frequencies which should be excluded from our submission. To clarify Transeastern Holding Corporate DBA Observant Network position we are providing the following and previously granted Experimental Radios Station Construction Permit and License **WG2XDI** as an example to assist the FCC in our readiness to exclude/ notch out and eliminate the following identified prohibited frequencies for testing purposes contained on page two of the attached FCC license and others which might be warranted by the Commission.

Observant Network wishes the Commission to understand that the attached FCC license which excluded certain channels will not be needed in our parameters to produce quality testing for our new product.

Humbly at this time and with the understanding certain frequencies will be excluded in our pending application during the testing of our new product, Observant Network would like to respectfully request the **expedient processing** of our pending application for grant.

Respectfully,  
Mr. Mark Allen  
309-339-6475

Thank you and please contact the below name or number in a case Mr. Allen is unreachable or unavailable.
