

The frequency and license request are for CODAR installations needed for a 5-year \$7.5M National Science Foundation study (#9907884, Dr. John Largier, Scripps Institute of Oceanography, Lead PI) to monitor and model ocean upwelling phenomena off of Bodega Head, California. UCD Davis, Scripps Institute of Oceanography and San Francisco State University researchers are collaborating on this effort.

Additionally, the Sonoma County Water Board recently awarded UC Davis-Bodega Marine Lab a \$500,000 contract amendment (#TW 99/00-110, 3/27/01) to install and operate a CODAR array for continuous environmental monitoring (sea surface currents) adjacent to sensitive salmon habitat.
