

3/19/2019

To Whom It May Concern:

This is to certify that:

US Internet is deploys and/or manages radio frequency equipment.

The RF experimentation will be conducted by following a strict Test Plan defined and approved by US Internet in a controlled environment

US Internet will have a project Manager in place to specifically follow the Test Plan, track results, and publish test results.

US Internet has extensive RF experience and expertise deploying RF networks and has a number of RF engineers on permanent staff.

For the above reasons, I believe US Internet meets the Eligibility criteria for a Special Temporary Authority experimental license as set for in the Commission Rules.

Sincerely,

Travis Carter

CEO
