ALL-STAR/ THEIA

Brian Sanders

13 November 2013

Dear Brian

Following an urgent request from Nicole Ela I have looked at your latest update and have changed the uplink to the best possible available within the bandplan.

Downlink	2401.700	MHz
Uplink	437,000	MHz

The above frequencies have been coordinated with the understanding that you have agreed to the IARU terms of reference for the use of amateur service spectrum for experimental purpose.

Please advise us the launch date once it is known. Although we have avoided coordinating frequencies which have already be coordinated for other known satellites on the same mission, it remains your responsibility to check for any possible conflict and advise us accordingly

Please also confirm the name and full contact details of the person who will control the operation of ALL-STAR after launch.

Please note that all frequencies in the amateur satellite service are shared frequencies. We have attempted to make the best possible selection for your project.

We have noted the measures taken in controlling the satellite. We however draw your attention to the attached paper "controlling satellites" which sets out the requirements as per ITU regulations.

Best wishes for a successful project. Please keep us informed of progress
