Message:

Iridium had asked whether our project could be covered by their Part 25 license. Upon further investigation, the breakup of the specific return vehicle for our mission could occur as high as 85 km. This decent altitude is higher than were originally working with, prior to knowing the specific vehicle. 85 km is above the altitude covered by Iridium's Part 25 license. Therefore, Iridium is submitting an application for the companion license, per your requirement.
