Thanks Paul. The IARU Satellite Frequency Coordination Panel doesn't need any additional paperwork and does not intend to issue an updated coordination letter.

73, Hans PB2T

>

> The IARU coordination letter for the HuskySat-1 states to provide the final launch and API/A number once known. The API/A number is not yet known, but the final launch is: Oct 19th 2019 with deployment 1-3 months later, and circular 51.6 degree between 455 and 500km. Please let us know if we need an updated coordination letter or if there are any additional steps required.
