Subject: Request for Info - File # 0644-EX-ST-2021

Message:

The closest FES (located about 2 miles away) is the Hearst Stations located at 3 Television Circle. We will station our antenna and transmit directly into a building. Therefore, the loss through the building material should not affect any other signals. If we did point directly at the Hearst station (which will we cannot do), we provided the calculations that show that the maximum power would be $2.182e-8$ mw (See Attachments)
