

**Modification of Experimental License
Call Sign: WD2XHT**

ViaSat, Inc. wishes to modify its existing experimental license, call sign WD2XHT. The modifications consist of adding antennas and frequency bands of operation. The experimental license is used by ViaSat's antenna systems (AS) group in Duluth, GA for the purpose of antenna development. Specifically, this license modification will allow the licensee to provide RF signal testing within the address location noted in the license. ViaSat will transmit low level CW signals for the purpose of obtaining radiation pattern characteristics. Below is a table of the frequencies being added and the power levels. The location of the transmitting antenna and the receive antenna are unchanged.
