

I am requesting permission to transmit in an additional frequency band with this electronic filing. Due to some problems with the FCC's electronic filing site, the additional request is not showing up on my submission.

The band of interest is:

Frequency: 1840-1990 MHz
Station Class: MO
Emission Designator: GXX (Spread Spectrum)
Output Power: 100 W (ERP)

Transmission signal is a spread spectrum signal with 150 MHz of bandwidth.

This band partially includes some PCS bands. However, the wideband spread spectrum signal should not produce any significant interference levels.
