Dear Doug,

The Attached excel document represents IMSA's search of NPSPAC channels for the proposed system. The highlighted channels need to be filtered out by Walmart due to anticipated harmful interference to presently licensed public safety licensees. This means we are NOT recommending those highlighted channels. Moreover, since Walmart is applying for an experimental license, their status would be secondary so if they cause interference to any of those NPSPAC licensees, they must cease their operation immediately.

I hope this helps. If you have any questions please call or email me immediately.

Sincerely,

Richard Kinsman
