Subject: Request for Info - File # 0663-EX-ST-2020

Message:

Explain how the system notches out frequencies to protect federal frequency assignments in the federally exclusive bands? Are notches applied via individual spot frequencies and protected bandwidths or are frequency bands within the federally exclusive bands notched out? How are additional frequencies to be protected as new frequency requirements are assigned in those federally exclusive bands especially once the system is put into production?

Is the system capable of notching out hundreds of spot frequencies and their associated bandwidths or will it simply notch out bands.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of May 26, 2020 may result in application dismissal pursuant to Section 5.67 and forfeiture of the filing fee pursuant to Section 1.1108.
