Subject: FCC File No. 0459-EX-ST-2009

---

Message:

You asked:

Mr. Marcus, Please address the following: It appears NTIA has objected to your client's request to operate within 608-614 MHz (407-960 MHz) due to the federal operations at these 2 locations. Considering the requested bandwidth of 553 MHz, would your client be able to conduct their demonstration/operation if this portion (608-614 MHz) is notched out of the application? If not, they may need to consider either changing the freq. band or select a narrower bandwidth.

=====

It is my understanding that NSF, on behalf of itself and the radio astronomy community, has told NTIA later it had no objection to this application and that NTIA has now withdrawn this objection
