

AAI / Textron Systems is the provider of the Shadow 200, Aerosonde, Orbiter and other unmanned aircraft systems that support tactical applications and technology development for the military and government. The Shadow now has over 500,000 hours of flight for the Army, Army National Guard, SOCOM and Marine Corps providing support to our troops in the US and overseas. In addition, our Aerosonde product line supports the Marine Corps, NASA and other institutions for tactical support, scientific missions and military use. Our new technologies group develops, investigates and integrates technologies to support the future and current needs of the government.

Aerosonde is a tactical UAS that provides EO/IR and scientific mission support. This platform is used by SOCOM for sensor integration and mission support. Aerosonde has performed numerous scientific missions as well. The Aerosonde has had a key role in getting valuable data in the eye of a hurricane for NASA, performed wildlife and other scientific missions.

The Orbiter is a 20 pound aircraft it is an electric powered aircraft with a similar size and mission profile as the Aerosonde.

Thank you for your consideration. Should you desire any additional information on this request, please feel free to contact me at 240-925-4158 or email Mercado@aaicorp.com

Sincerely,

Michael H. Mercado
