

AAI / Textron Systems are the provider of the Aerosonde Small-Unmanned Aircraft Systems that supports tactical applications and technology development for the U.S. military. The Aerosonde has over 3000 hours of flight for the Army, SOCOM and Marine Corps providing support to our troops in the US and overseas. In addition, it supports NASA and other institutions for scientific missions. Our new technologies group develops, investigates and integrates technologies to support the future and current needs of the government.

Aerosonde is a tactical S-UAS that provides EO/IR and scientific mission support. The Aerosonde is a 34 pound aircraft powered by a gas engine.

Current government contract with SOCOM for the USMC is - CSISC10-AAI Corp-0011-001 with Compass Systems – located at Army Yuma Proving Ground, Yuma, Az.
