

I have removed frequencies from our request which are being used within 50 miles of our future test facility. This facility is within a few miles of Seymour Johnson AFB in Goldsboro NC. We are in contact with them with the attached contact point to avoid any problems from our proposed transmissions.

They do not expect any issues from the frequencies we expect to use but will let us know if any issues occur.

This request is a reduced frequency version of our current site license. (WE2XPG) with frequencies in use within 50 miles of our Goldsboro site removed from the request.

Please let me know if you need any further information:
