

Exhibit A: Narrative Statement

The Special Temporary Authority will be used for proof of concept testing and demonstration of the Adaptix WiMax standard technology. Adaptix, Inc. is a leading edge technology developer and patent applicant for new and innovative point-to-multipoint OFDMA radio technology.

The products to be tested are based upon the IEEE 802.16d and e (Wimax) standard. The theory of the operations is to use the STA for the following:

1. Provide proof of concept testing of the technology and the standards
2. Demonstrate of the products
3. Validate the accuracy of simulation models
4. Determine the product's tolerances to real-world interference
5. Test the product's tolerances to real-world interference
6. Test the product's fixed and mobility performance
7. Experiment with high-efficiency coding algorithms

These objectives are critical to the success of our product and represent a significant advancement in the development of the radio art.
