

Exhibit A: Narrative Statement

Experimental License will be used for the testing of commercial communications products developed by Adaptix, Inc. Adaptix, Inc. is a leading edge technology developer and patent applicant for new and innovative use of point-to-multipoint OFDM radio technology.

The product to be tested is based on the IEEE 802.16d (WiMax) standard. The theory of operation is described in detail in publicly available documents published by the IEEE.

The test objectives are:

1. to demonstrate the product,
2. to validate the accuracy of simulation models,
3. to determine the product's tolerance to real-world interference,
4. to test the product's tolerance to real-world interference,
5. to test the product's mobility performance, and
6. to experiment with high-efficiency coding algorithms, a potential source of intellectual property.

These objectives are critical to the success of our product, and represent a significant advance in the development of the radio art.
