Re: FCC File # 0379-EX-ST-2004

1. Will a customer market study be performed under this experiment?

While the customer must be part of the field device testing, no “official” report will be issued. AMDS and the client will work together to identify areas within the system configuration that need to be addressed in order to make this a viable system.

2. If a customer market study will be performed, will the customers participating in this experiment be charged any fees?

There are no fees to the customer associated with the experiment.

3. Will the devices used in this experiment remain the property of Advanced Metering Data Systems (AMDS) throughout this experiment?

Yes, the devices will be the property of AMDS throughout the test.

4. Will the devices be retrieved by AMDS at the end of this experiment?

No, the Radio is embedded in the meter's housing so the Radio will either be deactivated and not used, or if the utility decides to go forward with commercialization, the radio device will be converted into a unit that has been FCC approved.
