Message:

The coordinates given in the exhibit, NL 43-29-50, WL 114-17-26, refer to the reference point for Friedman Memorial Airport, on which the system will be installed. The two points in the data identify the actual locations of the radiating equipment on the airfield. The calibration antenna radiates at 1090 MHz and is located at NL 43-26-44, WL 114-17-15. The interrogator (1030 MHz) and the ILS localizer & glideslope uplink antennas are located at NL 43-26-48, WL 114-17-23.
