Subject: FCC File# 0783-EX-PL-2013

---

Message:

I have been trying to locate a phone number for the Southwest regional office contact names in order to obtain NG T numbers but the website dos not cooperate for that region. Can either of you provide that information to me?

The questions asked in the FCC response are for the NG T numbers and for the ERP of the frequencies. I will get NG T numbers when I can get a contact to provide that from.

ERP numbers are in the application. The two frequencies we use are 1030 MHz and 1090 MHz. The 1030 MHz is the interrogation transmission and it has an ERP of 400 Watts. The 1090 MHz is a local calibration/Built in Test signal that transmits at an ERP of 25 Watts.

The name of the person turning the system off is the application person John Thompson and his phone number is 575-770-1755

I will continue to try and get NG T numbers but but am having trouble locating a useful number.
