

Description of Revisions to Form 442

Pursuant to discussions with Iridium, Aethero has updated the following elements of its application for a modification:

- It is adding the make and model of the modems used to communicate with the Iridium system; and
- It is revising its spectrum request to cover the 1610-1626.5 MHz band because operations in the band may require more than one center frequency over the course of Titan's mission.

Please let us know if you have any questions about these changes.
