

This license is for the purpose of running a GPS Repeater unit in our manufacturing facility to test our end product that has a GPS module. The repeater kit that we purchased has a range of 10 meters and will be placed near the center of our facility. The GPS Repeater is a Tri-M Super Radiator, the documentation for which has been attached to this application. They are our point of contact for expertise in radio spectrum management. The engineers at our company will monitor the emissions of the repeater outside to ensure that there is not leakage. The indoor emissions will be regularly monitored through testing of units.
