Subject: Request for Info - File # 0193-EX-CN-2026

Message:

The connection point for the VSAT terminal is the satellite and the corresponding earth station is as identified in our application.

• The satellite is Telstar11N

• The earth station used by Telstar11N: Mount Jackson Teleport/USA (MTJ4)

We have contracted for test data to be sent from our application servers in a datacenter in Ashburn VA, through a terrestrial MPLS network into the Mount Jackson Teleport, which uplinks our data through Telstar11N and downlinks that data into our test Ku-band VSAT terminal in McLean VA. Once the test data is received, we send back performance monitoring reports back from the VSAT terminal on the reverse path (T11N and Mount Jackson Teleport) to our application servers in Ashburn VA.
