Message:

The 300MQXN was per the radar vendor Fortem, which aligns with a similar designation for their earlier R20 model (FCC ID 2APIM-FTR20SKYD).

The 190MFXN was also per the radar vendor, in this case, Echodyne (FCC ID 2ANLB-MESASSR00053). In this case, however, there does appear to be a typographical error in the bandwidth portion of the designator. The "190M" should be "45M0".

AiRXOS understanding is that the "X" designator was being used as these units are being designed for radiolocation and, in some cases, radionavigation as well. Neither of these functions fall under an existing designation we could identify.
