Exhibit 1 - ORDERMAN

The application for the use of the hand held terminals " ORDERMAN " which transmit radio signals to order the menu at the patrons tables in restaurants is requested to test such use in a pilot program. The hand held terminals transmit the orders to an antenna, stationed in the restaurant, and from there to the kitchen, the accounting department and the invoicing printer.

The pilot program includes the use of 22 hand held terminals in two restaurants , two local antennas inside the restaurants and four routers.

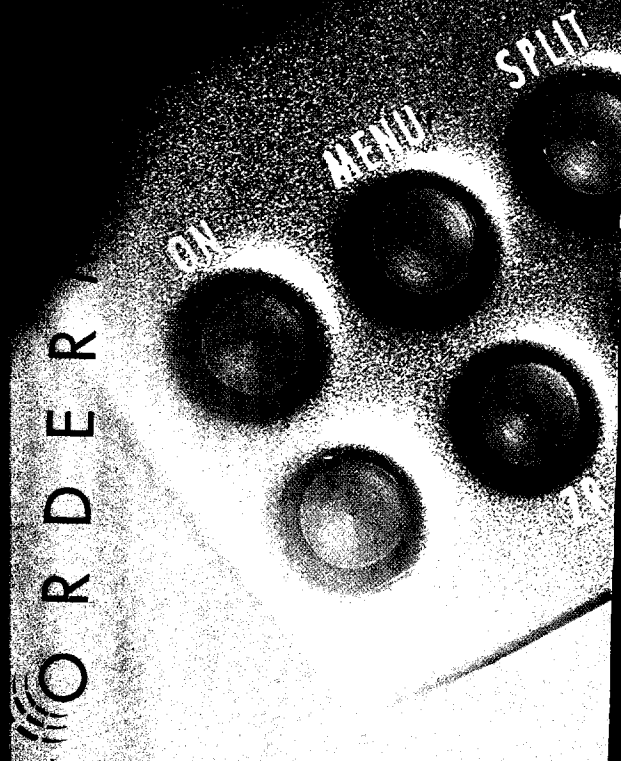

The equipment, described in Exhibit 2, is in successfully in use in over 250 restaurants in Europe.

The objective of the pilot test is to identify the physical and economic benefits to the waiters and restaurant owners and the eventual modifications for the market in the United States.

Training and supervision of the pilot project will be monitored by professional staff.

Upon completion of the pilot project, application will be requested for eventual modified products including a 928 Mhz frequency and for a permanent use in the American markets.

**Waiter,
please!**

Data & Facts

Components:

Orderman
RF-Basestation
Router
Charging Station
Rechargeable Batteries

Scope of delivery:

Orderman including rechargeable
batteries and AC-adapter

Orderman:

intelligent handheld RF-terminal
with integrated communication - firmware

CPU:

Motorola

Display:

graphics-LCD with rear-illumination
(disconnectible) with 8 lines each
21 characters

Keyboard:

26 keys, rear-illuminated,
programmable

Measurements:

90 mm x 197 mm

Weight:

390 g

Working time:

up to 10 hours, depending
on the use of rear-illumination

Programming:

Commands are sent via RF-Basestation
over RS-232 using any programming-
language

Data-transmission:

Bidirectional RF-transmission, 9600 bps,
no light-sensitivity like infrared terminals

Transmission range:

60 to 100 meter diameter per
RF-Basestation

Maximum extend:

8 Orderman per RF-Basestation
16 RF-Basestations per Router
= 128 Orderman per Router

economy**

Orderman runs ergonomically

Orderman is founded in its idea: *Orderman* runs on the energy from strong long-lasting batteries and throw-away batteries. As long as it is placed at your hand in the kitchen, it is able to recharge your batteries in price-reduced current.

Orderman batteries guarantee long service life as well as frequent recharging.

Orderman is accompanied with an all-in-one system, ensuring the rechargeable

charging station with the batteries is available. Batteries can be changed without loss of data. No need for a charge on an ap-

Orderman is thought out ergonomically

The idea of *Orderman* optimally meets two requirements:

First, *Orderman* does not disturb the guest's relaxed atmosphere.

Second, for your service staff, it will soon be unthinkable without *Orderman* due to its optimal and easy applicability. Thanks to the smallness of the handset, your guests probably will not even become aware of *Orderman*.

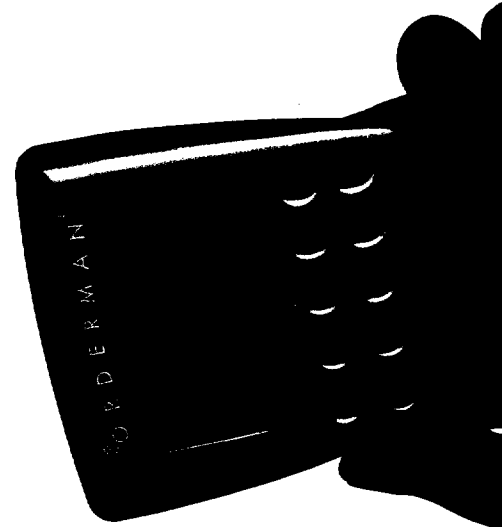

And thanks to special features your staff will be able to run *Orderman* without any problem:

- Optimal readability due to the anti-glare display.
- Assured faultless application despite dimly lit restaurants due to the rear-illuminated keyboard
- False operation, like pressing two buttons at the same time, will be avoided due to fitted buttons.
- Buttons that carry out important functions are additionally marked with different colors.
- *Orderman* can easily be used by both right-handers and left-handers.

Orderman increases your profit

After brief instruction, your service staff will immediately recognize the efficiency of the idea as working gets remarkably easier. Even the owner's profit is measurable:

- service staff stay with the guests, and therefore have more time left for attending and taking his orders.
- service is streamlined, increasing turnover automatically - experience shows: up to 25 % more.
- Ultimately, the running of *Orderman* even makes the reduction of top-service staff possible!
