

EXHIBIT No. 1

The reason we are applying for this authorization is so that we may perform electric field radiated susceptibility testing (per IEC 801-3) on computer equipment or motorized vehicles that are too large to be tested in our shield rooms. Our open area test site is physically capable of testing these large products for verification to the appropriate radiated and conducted emission requirements. It would be of great convenience to the manufacturers if they could perform the recommended immunity testing at the same time. Our remote location should allow for minimal interference to anyone. This testing is essential in the effort to provide electronic equipment that does not interfere with, or is interfered by, other equipment.
