To Whom it may concern;

AML Wireless Systems, Inc. designs and manufactures wireless communications equipment. We have customers in virtually every state and we use this experimental license to demonstrate product and system performance and capability with both existing and potential customers.

Currently our license is not being used to cover any active field equipment. We use our license for relatively short periods of time (typically less than 30 days) in widely dispersed geographical locations.

Some specific examples of where we have used our license over the past few years include 2-Way path performance testing in Austin, Texas; path performance evaluation in Bridgeport, Texas; Concord, California; Acworth, Georgia; Dallas, Texas; Los Angeles, California and San Antonio, Texas.

We plan on using our license later this year for 2-Way path performance tests in Corpus Christie, Texas and Nagshead, South Carolina. Our use of the license is difficult to predict as it is predicated on customer demand and their own license situations.

If we can provide further information please contact us at 800-663-7902 or at one of the following e-mail addresses:

Greg Boyd, Operations Manager	gboyd@amlwireless.com
